Overview

The business of innovation is rewarding, driving productivity and economic growth and changing the way we live and work. But it is also highly competitive, requiring the conviction to develop nascent products, the creativity to amass market share, and the tenacity to safeguard pivotal IP assets. O'Melveny offers the complete suite of legal and business expertise to players in the technology arena, supporting growth at every stage of the corporate life cycle—from early-stage start-ups to multi-billion-dollar global enterprises.

Our lawyers are seasoned counsellors, most of whom have decades-long track records of helping technology companies secure success in the boardroom as well as in the courtroom. Noted for acting as true partners to our clients, we work to understand their products, business models, and corporate objectives. We feature particular strength in some of the hottest sectors across the industry, including cloud computing, enterprise software, consumer products and electronics, media and entertainment, efficient and sustainable technology, mobile, and semiconductors and capital equipment, as well as the emerging financial technology and “sharing economy”

Accolades

"With its national coverage and depth

of expertise, the firm's bet-the-company labor and employment litigation practice is very well known."

Legal 500 US

sectors.

The strongest validation of our commitment is the success of our clients —*Legal 500* observes that "[O'Melveny's] success in the sector is illustrated by the number of key clients that have risen from start-up status to major global brands."
